**DETAILED ACTION**

***Election/Restriction***

1. Restriction to one of the following inventions of Groups I, II and III is required under 35 U.S.C. 121:

I. Claims 1-56 and 158, drawn to a semiconductor device, classified in class 257, subclass 737.

II. Claims 57-149, drawn to a method of making a semiconductor device, classified in class 438, subclass 613, and

III. Claims 150-157, drawn to an apparatus for making a semiconductor device, classified in class 228, subclass 25.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Group I invention would not necessarily imply unpatentability of the process of the group II invention, since the device of group I invention could be made by the processes different from those of group II invention. For example, by laminating the solder alloy having a second metal to the solder bump having a first metal and then performing preheat and reflow at desired temperatures to form the intermetallic compound instead of fusing the alloys.

Art Unit: 2811

Inventions of Group II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the semiconductor device having a solder bump can be formed using an apparatus built with a radiation heating system instead of a heating plate.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
